(3) Portable navigation becomes a reality:

By Serge Bussat, Vice President and General Manager Consumer EMEA

The year 2007 proved to be another great year for navigation solutions. Navigation on a mobile phone finally became a reality and it is estimated the portable navigation device market will have risen about 60% year-on-year.

Serge Bussat, Mce President and General Manager Consumer BMEA

After much effort, devices have become much easier to use: the hardware features have improved devices now so

features have improved, devices now sport larger screens, ultra thin designs, Bluetooth and multimedia functions. At the same time they have become more affordable. With extended map data, encompassing more countries and more points of interest, NAVTEQ has played its part in the success. Programs such as NaviVision and NaviTour were all held throughout the year and proved highly successful.

Portable Navigation Devices will again be one of the top selling gifts for Christmas and more navigation enabled phones will be sold than ever before. NAVTEQ has worked with everyone to maximize this opportunity. We will continue to do so in 2008 with extended programs in Eastern Europe, the Middle East and Africa and the participation in key industry events such as the Mobile World Congress in Barcelona and Cebit in Hannover.

With even more focus being put on 3D/visual aspects of navigation, more POIs and more connected devices, 2008 will be another revolutionary year. We at Navteq will continue to work hard to enable that revolution
